Marketing Online (2019)

- Knowledge of search engine optimization, SEO and digital marketing.

Self-paced courses on Udemy, FreeCodeCamp and CS50, among others.

Work experience

Indra
Valencia
2 months

I contributed to the development of an application based on Spring Boot (Java) where I used technologies such as JS, HTML and CSS, with Bootstrap and Thymeleaf for the design. This application had connection and execution functionalities through JPA and JDBC in addition to being made using Hibernate and Maven.

 was also responsible for ensuring security in the login process of the application, which was deployed in a MSSQL server environment on a Tomcat. In addition, I collaborated in the shared management of the application with my colleagues through SVN.

Finally, I was logging, debugging and documenting the applications that the company already had in addition to the newly launched one.

Software domains
